

Develop the next generation *Rollers* WITH US

CONTROL

Want to heat up the cabin? or check fuel level? Now you can control your machine with your mobile device.

SUPPORT

Troubleshooting? With the new app it has never been easier to contact service or other support.

TUTORIALS

Unexperienced or want to learn more? Our new tutorials will show the path to excellent results.

Develop

You can now get your voice heard and react on upcoming concepts.

Voice of the customer 2.0

- We want to create the best experience for our customers by developing rollers with YOU in mind.
- We want to know what you think about our machines and how we can make them better.
- With your feedback, we can develop the next generation of rollers together.

BE THE BEST VERSION OF YOU

We want you to get the best result when compacting. Therefore we can now offer you step-by-step instructions to develop your driving whether you are experienced, or never have driven a roller before.

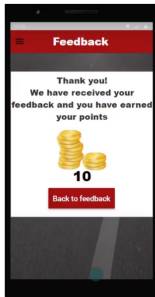

LEAVE FEEDBACK

The bestway for us to learn what you want is by telling us! We have now created a new system where you can discuss your pains and gains with us. If something can't be explained in words there is no need to worry. We have added functions that will help you describe your problem with pictures, videos and audio.

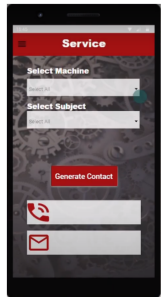

Beat your colleagues and friends

By completing tutorials, objectives and driving, you will not only learn more about the machine, you will also level up. The one with the highest level is the one with most knowledge, or what do you think?

Find your motivation

Browse upcoming concepts and reflect with others to participate in the development. By giving us valuable information, we will show our gratitude by rewarding those who deserve it.

Get in contact with the right person, at any time

You can now contact experts in the field you are searching for via the app. By specifying the area that requires support, we can connect you to the expert you need.
